

Contents

1	Introduction	1
Part I: Support Vector Machines		
2	Support Vector Learning and Optimization	7
2.1	Goals of This Chapter	7
2.2	Structural Risk Minimization	8
2.3	Support Vector Machines with Linear Learning	9
2.3.1	Linearly Separable Data	9
2.3.2	Solving the Primal Problem	13
2.3.3	Linearly Nonseparable Data	17
2.4	Support Vector Machines with Nonlinear Learning	20
2.5	Support Vector Machines for Multi-class Learning	23
2.5.1	One-Against-All	23
2.5.2	One-Against-One and Decision Directed Acyclic Graph ...	24
2.6	Concluding Remarks	25
Part II: Evolutionary Algorithms		
3	Overview of Evolutionary Algorithms	29
3.1	Goals of This Chapter	29
3.2	The Wheels of Artificial Evolution	29
3.3	What's What in Evolutionary Algorithms	31
3.4	Representation	33
3.5	The Population Model	34
3.6	Fitness Evaluation	35
3.7	The Selection Operator	35
3.7.1	Selection for Reproduction	35
3.7.2	Selection for Replacement	38
3.8	Variation: The Recombination Operator	38
3.9	Variation: The Mutation Operator	41

3.10	Termination Criterion	43
3.11	Evolutionary Algorithms for Classification	43
3.12	Concluding Remarks	45
4	Genetic Chromodynamics	47
4.1	Goals of This Chapter	47
4.2	The Genetic Chromodynamics Framework	48
4.3	Crowding Genetic Chromodynamics	51
4.4	Genetic Chromodynamics for Classification	53
4.4.1	Representation	54
4.4.2	Fitness Evaluation	54
4.4.3	Mating and Variation	54
4.4.4	Merging	55
4.4.5	Resulting Chromodynamic Prototypes	55
4.5	Experimental Results	55
4.6	Concluding Remarks	56
5	Cooperative Coevolution	57
5.1	Goals of This Chapter	57
5.2	Cooperation within Evolution	57
5.3	Evolutionary Approaches for Coadaptive Classification	61
5.4	Cooperative Coevolution for Classification	61
5.4.1	Representation	63
5.4.2	Fitness Evaluation	63
5.4.3	Selection and Variation	64
5.4.4	Resulting Cooperative Prototypes	65
5.5	Experimental Results	66
5.6	Diversity Preservation through Archiving	67
5.7	Feature Selection by Hill Climbing	69
5.8	Concluding Remarks	72
Part III: Support Vector Machines and Evolutionary Algorithms		
6	Evolutionary Algorithms Optimizing Support Vector Learning	77
6.1	Goals of This Chapter	77
6.2	Evolutionary Interactions with Support Vector Machines	78
6.3	Evolutionary-Driven Support Vector Machines	78
6.3.1	Scope and Relevance	79
6.3.2	Formulation	80
6.3.3	Representation	80
6.3.4	Fitness Evaluation	80
6.3.5	Selection and Variation Operators	83
6.3.6	Survivor Selection	83
6.3.7	Stop Condition	83
6.4	Experimental Results	83
6.5	Dealing with Large Data Sets	85

Contents	XIII
6.6 Feature Selection by Genetic Algorithms	86
6.7 Concluding Remarks	88
7 Evolutionary Algorithms Explaining Support Vector Learning	91
7.1 Goals of This Chapter	91
7.2 Support Vector Learning and Information Extraction Classifiers ...	92
7.3 Extracting Class Prototypes from Support Vector Machines by Cooperative Coevolution	94
7.3.1 Formulation	94
7.3.2 Scope and Relevance	94
7.3.3 Particularities of the Cooperative Coevolutionary Classifier for Information Extraction	96
7.4 Experimental Results	98
7.5 Feature Selection by Hill Climbing – Revisited	101
7.6 Explaining Singular Predictions	104
7.7 Post-Feature Selection for Prototypes	105
7.8 Concluding Remarks	108
8 Final Remarks	111
References	113
Index	121
